Your best employee knows things your SOP doesn't.

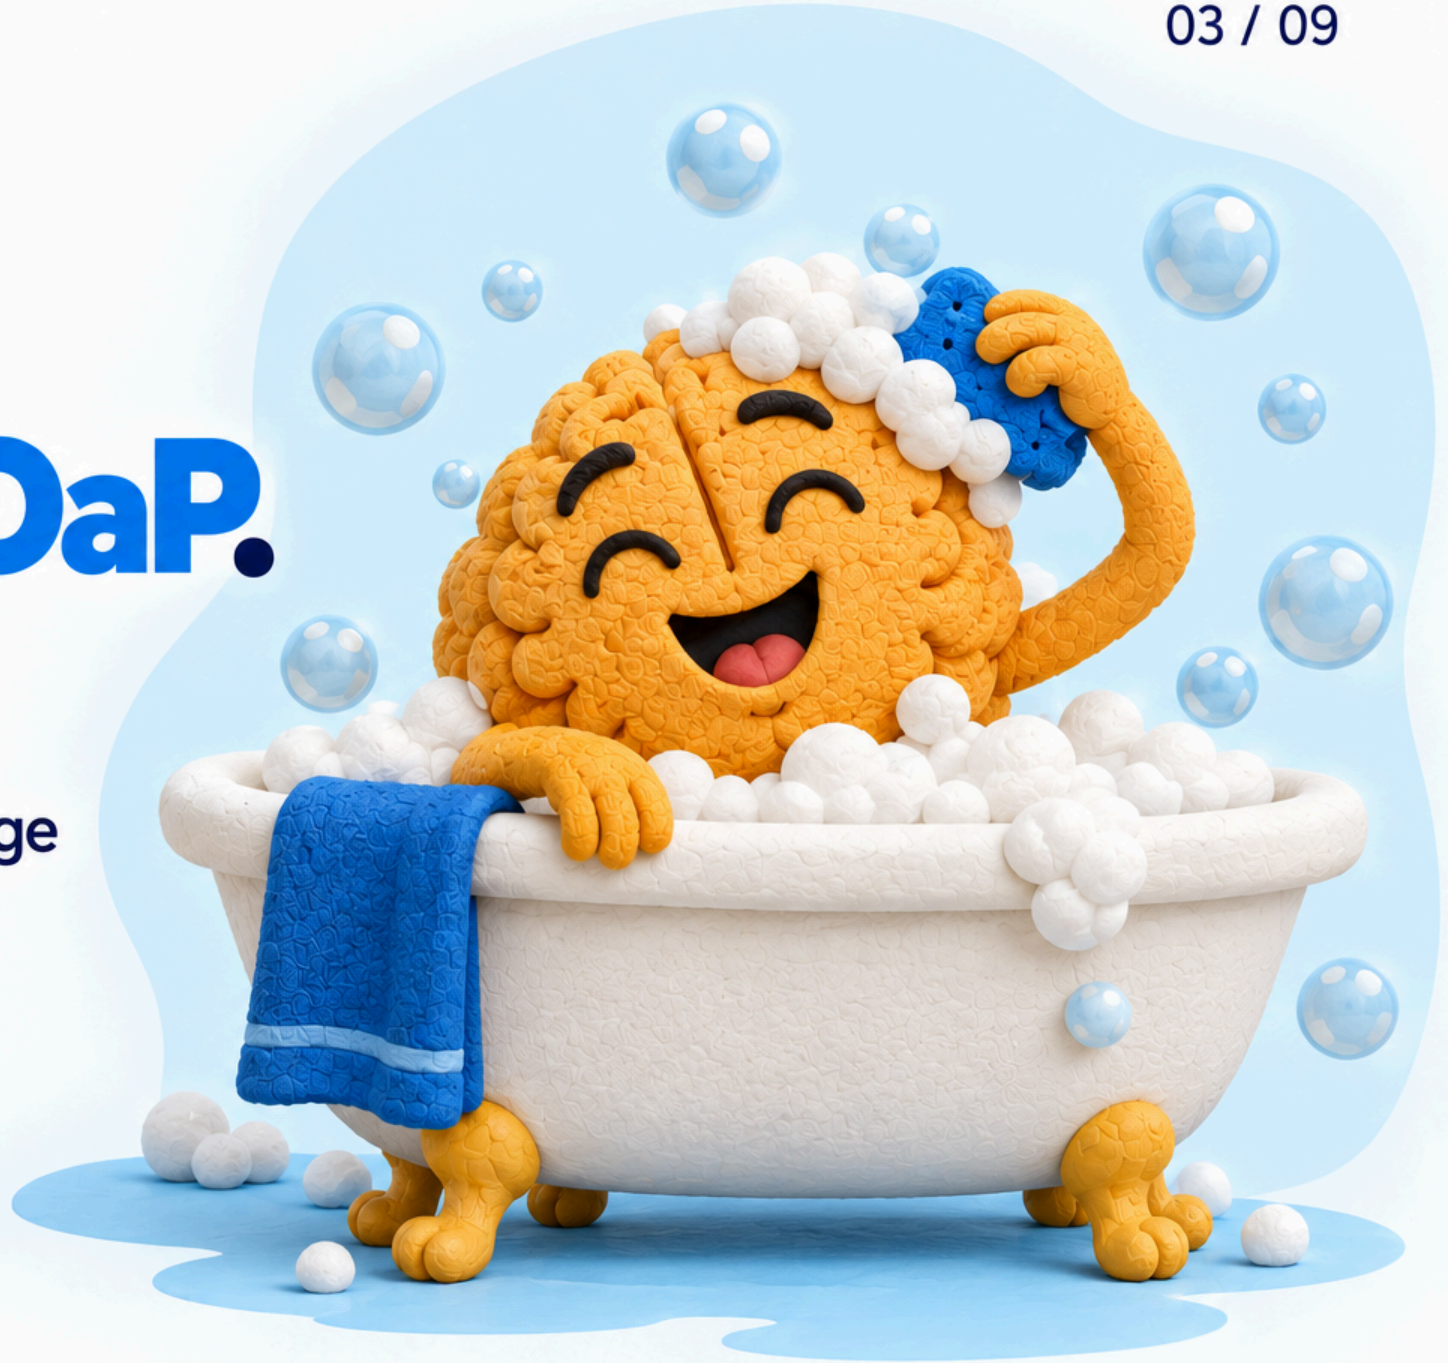
Experience, context, exceptions, and the little tricks that make things work often live in people's heads — not in documents.

SOPs tell you what should happen.

They rarely capture the real-world decisions, exceptions, context, and ‘this is how we actually do it.’

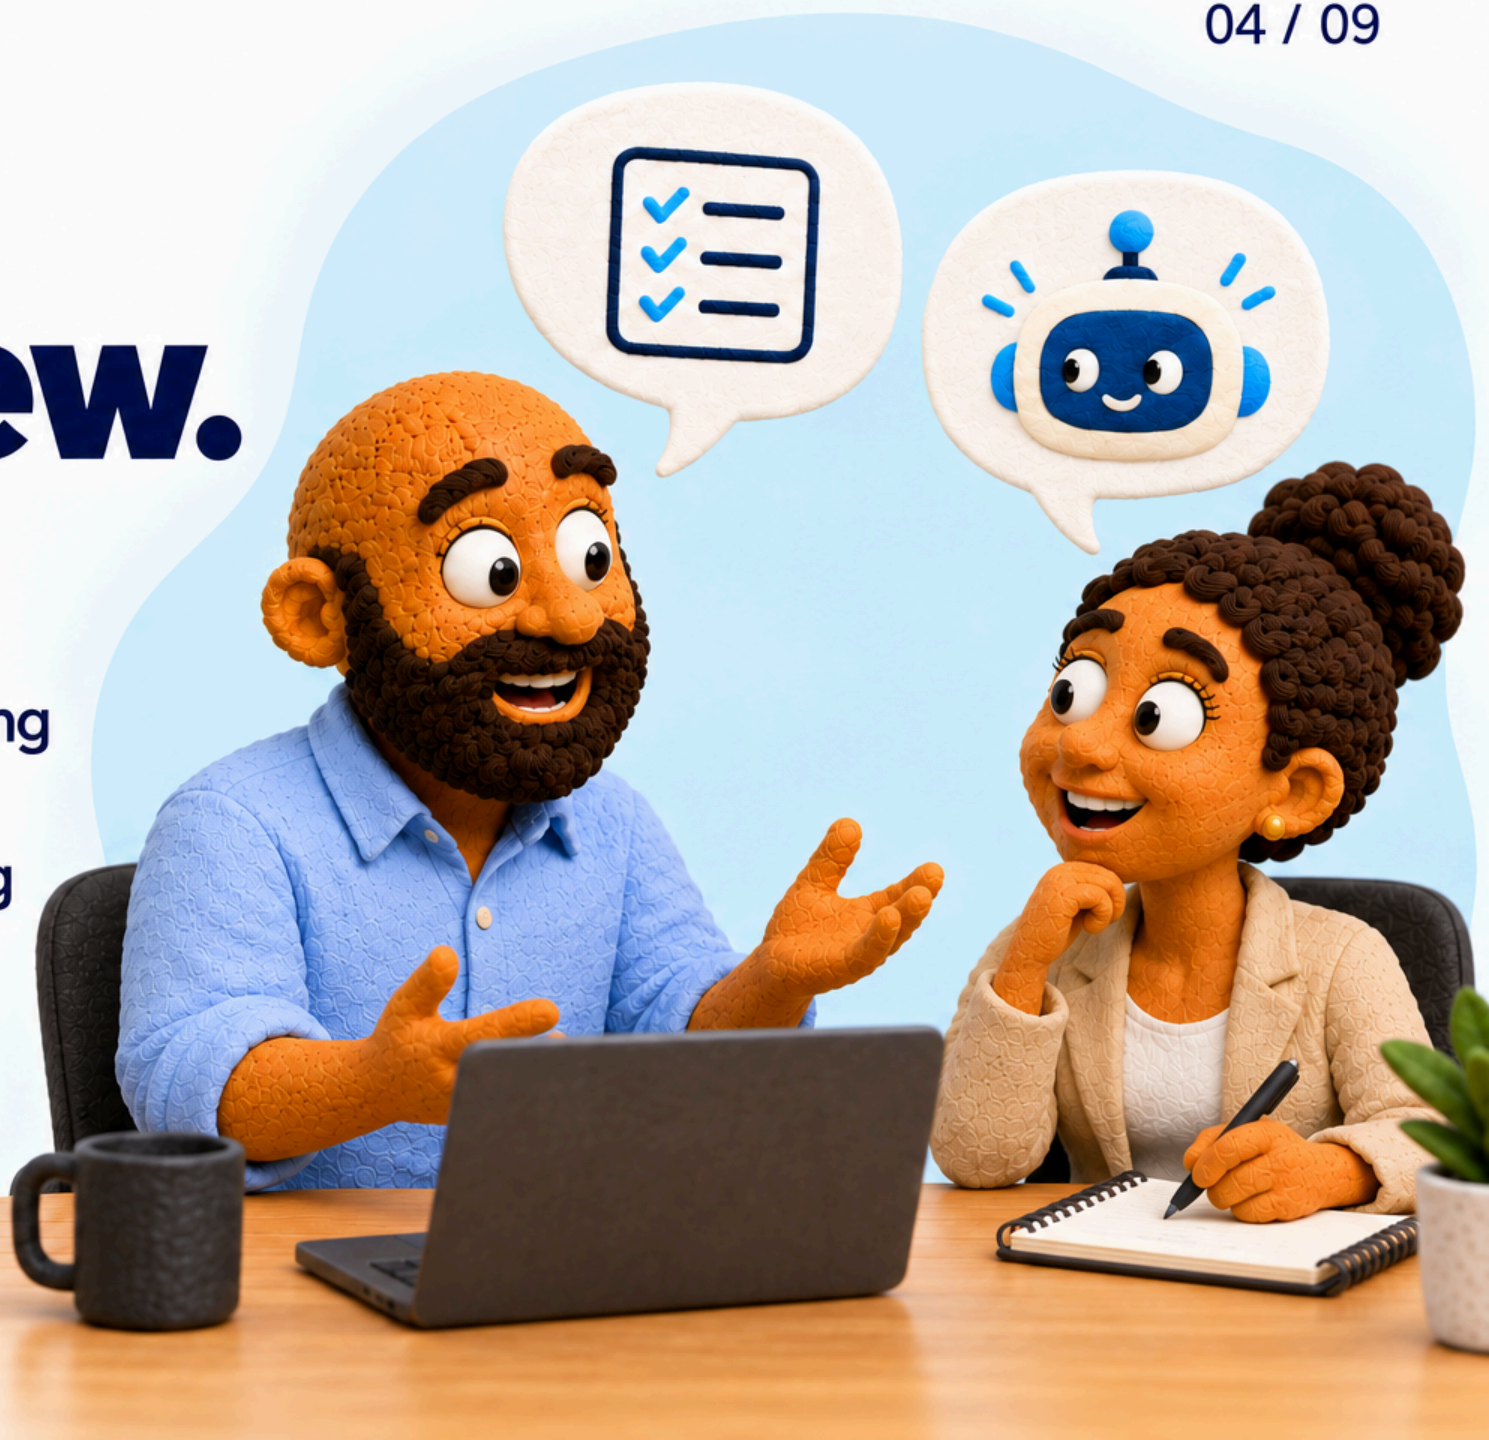
Meet Noodle SOaP.

A human + AI process that captures practical knowledge and turns it into reusable intelligence for your team and AI agents.



Interview.

A combination of human guidance and AI interviewing helps uncover how work really gets done — including decisions, exceptions, and reasoning.



Capture.

Human review plus AI analysis combine interviews, SOPs, and supporting documents to extract steps, rules, exceptions, and context.

Teach.

The knowledge becomes Noodle Skills and Plays that people can use and AI agents can follow — with human approval and governance.

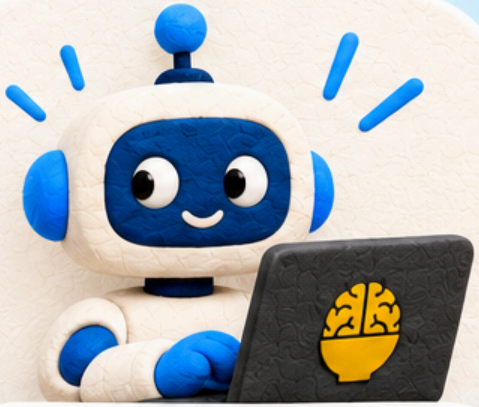
Real business results.

Preserve institutional knowledge, reduce ramp-up time, improve consistency, and empower both your team and your AI agents.

Faster onboarding

Consistent processes

Empower your team



Enable AI agents

People stay in control.

Your subject matter experts review and approve the captured knowledge.
You decide what AI can do and what always requires a human.

Noodle SOaP

Interview. Capture. Teach.
